## Back-to-school COOL with WordLock

August 19th, 2010 4:37 pm

My word! Now you can open your locker with a word of your choosing! WordLock is the first combination lock that opens with a word instead of a number. Gone are the days of dreary number combinations that someone at a factory pre-set. Now, simply pick the word you want to unlock your locker, gym bag, bike or anything else

Our teen reviewer thought this lock was, in a word, awesome. "Way easier than number locks...something I'll remember because I set it myself!"

WordLock is the first combination lock that uses words instead of numbers!

There are 100,000 possible letter combinations and this lock offers maximum security due to its 2 5/8 inch hardened steel shackle. It's rated to 3,000 pounds of pull

strength, which translates into lots of security for you. There are no removable parts or extra wheels to keep up with. It couldn't get any more simple.
